DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-30, drawn to an organic semiconductor device, classified in class 257, subclass 40.
- II. Claim 31, drawn to a method of making an organic semiconductor device, classified in class 438, subclass 99.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, unpatentability of the Group I invention would not necessarily imply unpatentability of the Group II invention, because the device of the Group I invention could be made by process(es) materially different from those/that of the Group II invention. For example, the device could be made by depositing an organic semiconductor layer, and then depositing a first and second electrode, rather than by depositing the semiconductor layer between the first and second electrode as in claim 31.
